SUMMARY

Systems-focused DevOps Engineer specializing in automating infrastructure, enhancing security postures, and optimizing deployment pipelines. Deeply experienced in managing high-availability Kubernetes clusters and orchestrating cloud environments via Infrastructure as Code. Passionate about building robust observability stacks to ensure zero-downtime deployments for mission-critical enterprise applications.

EDUCATION

Institute of Technology and Science
Bachelor of Engineering in Information Technology

Boston, MA
May 2020

PROFESSIONAL EXPERIENCE

Global Finance Corp
Site Reliability Engineer

Remote
March 2022 – Present

- Designed and managed multi-region AWS cloud infrastructure using Terraform, ensuring 99.999% uptime for core financial trading applications.
- Implemented comprehensive monitoring and alerting systems using Prometheus, Grafana, and PagerDuty to proactively identify and resolve network bottlenecks.
- Migrated 40+ legacy virtual machines to Dockerized containers orchestrated by Kubernetes, cutting server provisioning time by 80%.

SecureNet Technologies
Junior DevOps Engineer

Boston, MA
June 2020 – Feb 2022

- Built CI/CD pipelines in GitLab CI to automate code testing, security scanning, and deployment, reducing manual deployment errors by 100%.
- Administered enterprise Linux server environments (CentOS, Ubuntu), performing routine kernel patching and security compliance audits.

SELECTED PROJECTS

Automated Disaster Recovery Framework
Creator & Maintainer

Python, AWS Boto3
Nov 2022

- Developed a serverless AWS Lambda framework utilizing Python to automatically snapshot RDS databases and replicate them across geographical regions for disaster recovery compliance.

Kube-Secure Policy Engine

Open Source Contributor

Go, Kubernetes API

April 2021

- Contributed to an open-source policy engine ensuring that all pods deployed to a cluster adhere to strict least-privilege security contexts before allowing admission.

SKILLS & EXPERTISE

Cloud Platforms:	Amazon Web Services (AWS), Google Cloud Platform (GCP), Microsoft Azure
Containerization:	Docker, Kubernetes (EKS, GKE), Helm, Containerd
CI/CD & Automation:	Jenkins, GitLab CI/CD, GitHub Actions, Ansible, Terraform
Languages & Scripting:	Python, Go, Bash, PowerShell, YAML
Observability:	Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), Datadog
